

4 Port Keyboard-Mouse Switch (KM0104)

Overview

The 4 Port Keyboard-Mouse Switch enables users to manage and switch KM (Keyboard and Mouse) functions of four connected computers, including multi-head computers. It supports seamless Keyboard-Mouse Command on 4 computers from a single workstation. The KM0104 is completely driverless, requiring no software. It is compatible with any PC and all major operating systems without the need for software downloads.

Product Features

- Manage 4 connected computers
- Dedicated simulation processor
- Support keyboard and mouse emulation
- Support multiple operating systems
- Support front panel switching
- Support stereo audio output
